1. Lines 230-235: Within the "electron probe measurements" be more specific. In particular, clarify which elements measured on which spectrometer. Additionally, give the element measured (in parenthesis) every after standard.
2. Line 234: What you mean by "primary standards".
3. line 344: Are you sure that the approach TWEEQC estimated equilibrium conditions?
4. Please define within the text the Xep and Xcz. 5. The authors measured epidote and

C1

omphacite using EPMA, but i cannot find any text about omphacite chemistry. Right?
