Received and published: 20 September 2020

1. Lines 230-235: Within the "electron probe measurements" be more specific. In particular, clarify which elements measured on which spectrometer. Additionally, give the element measured (in parenthesis) every after standard.
2. Line 234: What you mean by "primary standards".
3. line 344: Are you sure that the approach TWEEQC estimated equilibrium conditions?
4. Please define within the text the Xep and Xcz. 5. The authors measured epidote and
