

Supplementary Material

Figure S1: Spectrograms for period from February 24 to July 14, 2020 for all the available stations. Data are expressed as dB relative to $1 \text{ m}^2/\text{s}^4/\text{Hz}$

Figure S2: Daily maps representing the normalized power in the 2-20 Hz band during working hours. Topographic contours are included for reference.

Figure S3: Variations of the PSD of the seismic acceleration in the 2-20 Hz band for all the available stations. Dark blue: daily mean value during business hours (9:00-19:00). Orange line: Weekly mean average during working hours.

Figure S4: Daily maps representing the real power values in the 2-20 Hz band during working hours. Topographic contours are included for reference.
