Thank you for this comment.

Indeed, this part of the literature was overlooked, as the possibility of restoring salt structures through viscous rheology in geological models was not mentioned in the articles on structural restoration I read, except in Ismail-Zadeh et al. (2004), that I misread at the time, not realizing the method was already used for restoration purposes.

I would like to apologize for this overlook, that I assure you was not voluntary. I am currently working on revising the manuscript to ensure the previous works on this subject are duly acknowledged. On that subject, I am eager to complete and read this part of the literature and have already started doing so, but I wasn't able to download Naiara

Fernandez's PhD thesis from the link you provided. Perhaps the domain cannot be accessed from outside the University ? If that is the case, could you please send me the PhD manuscript so that I may read it ?
