

Dear SE editor,

We understand the point of view of Thomas Poulet in his last report and we would thank him again for his sincerity and his serious work on this review. As you we trust that the open access nature of SE may allow for the interested community to get access to this work and thus we also want to thank your decision. Following your recommendation, we have added some comments concerning the limitations and the validity of our framework in the discussion of the revised manuscript.

Best regards,

Jean Furstoss on the behalf of the authors.
