Dear Editors,

"Deep vs shallow – two contrasting theories? A tectonically activated Late Cretaceous deltaic system in the axial part of the Mid-Polish Trough: a case study from southeast Poland"

Since there were only some small changes to do – most of them refered to typos or other small glitches as indicated on the annotated version of the pdf from Jonas Kley, I have simply corrected them without tracking changes. I have also found some additional typos – all of them are corrected.

In the annotated version of the PDF any changes suggested by Jonas Kley are responded to as DONE or CORRECTED (please compare).

I have also corrected figures 2 and 3 according to suggestions of Jonas Kley.

Hope this new version will be acceptable.

Thank you in advance, Zbyszek Remin
